

## Nafshiyat Nihal Portfolio

Short pitch:

My portfolio website is a site that allows users to find out more information about me.

Long pitch:

The portfolio website allows users to see a picture of me to see what I look like, and they also get a brief description of my schooling, hobbies, and future goals in the profession of software / data engineering. My goal is to provide a website for users to see a personalized website of myself and get a brief overview of who I am / what I want to do. This is better than a simple resume as it offers some visualization and shows my personality a little bit.

Personas:

HR: People in human resources who are looking to hire me. I could link my portfolio during the hiring process so they could find out more about me.

People looking to enter the tech industry: If my portfolio is good, I can give advice to relatives / other friends who want to build a portfolio as well.

Professors: I may want to get a job as a TA/ULA, and I could show my portfolio to professors.

Comparative Websites:
